

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE		FM.CS.PRC.05
			Issue No: 01 Revision No: 00

Department Detail: IT Section / Corporate Services Department			
Name: Mahmud Husain Khan			
Designation: IT Manager			
Date: May 25, 2025			
Subject of the Project: AI @ EDC			
Reporting to: Hamdan Al Hosani			
BACKGROUND:			
Emirates Driving Company Abu Dhabi (EDCAD) was established in 2000, and is the only drivers' training and road safety institute in Abu Dhabi. EDC is a Public Joint Stock Company. EDC has a partnership with Swedish Road Authority (SWEROAD) to implement the best practices in drivers' training and road safety education in the emirate while maintaining the highest quality standards according to ISO 9001. EDCAD offers driver theory and practical training across all license categories, ranging from light vehicles, motorcycles, and heavy vehicles to heavy buses. As EDC strives to offer the best services to its customers and works towards achieving the EDC mission of "To work efficiently and effectively towards promoting and contributing to safer roads through innovation, collaboration, investment in new technologies and smarter operating and delivery models." EDC is embarking on a project to implement AI at selected EDC Departments to enhance productivity.			
OVERVIEW:			
DESCRIPTION OF SERVICE / Objectives:			
SCOPE OF WORK: EDC is seeking proposals from Partners, and this section defines under what conditions EDC will accept the deliverables resulting from this SOW. The acceptance of deliverables must be clearly defined and understood by all parties. Please carefully review the entire scope document, follow all stated instructions, and complete the following:			
S.No	Requirement Description	Vendor Response: Yes: Will be Implemented as part of the included scope & in BoQ No: Will not be Implemented as part of the included scope and not in BoQ.	Reference in Proposal (Required)

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05 Issue No: 01 Revision No: 00	
---	------------------------------------	--	--

	** Please carefully review the instructions when completing this form; failing to follow this will result in your proposal being disqualified ** 1. Changing format is not allowed 2. This form must be filled/completed in its' entirety. 3. The column "Reference in Proposal (Required)(Page No.)" must be populated with the correct page number, section number, and line number(s) in your technical proposal. Blanks will result in an NC (Non-Compliant) / 0 rating for that line item. 4. A "Partial" compliance in the "Vendor Comments & Response" without any explanation will result in a "0" rating. 5. Any "Yes" statements that conflict with your "Out of Scope" section will be considered as a "No" response. 6. All items in this "Scope of Work" will become part of the contract and must be included in any "Deliverables" list	Example Response: Yes (Will be Implemented within the total mentioned in commercial BoQ) Example Response: No (Will not be Implemented and not included as in commercial BoQ)	Example for "Yes": PG 8, Section 3.1, Line 5 – 7. Example Response: Not included as a standard part of the scope.
1	Section 1 - Business Requirements		
1.1	AI Use Case: Customer Happiness AI 1. End-to-End Customer Journey An AI-powered system designed to fully automate the end-to-end customer journey across the Customer Happiness department, with a primary focus on intelligent registration and scheduling for theory classes and driving lessons. The system should leverage AI agents (voice- and chat-based) to handle customer onboarding, automatically create and complete the customer profile in EDC's systems, and manage bookings based on real-time instructors and fleet availability. Instructor assignments		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	should take into account multiple factors, such as language preferences, customer location, and specific training requirements. The AI capabilities should also cover the full lifecycle of interactions, including class modifications, cancellations, and refund requests, as well as managing customer complaints and suggestions. The solution must be accessible through multiple channels including WhatsApp, email, phone calls, onsite kiosks, and online portals, ensuring an omnichannel experience for all users. Integrated with EDC's core systems, the AI agents should provide dynamic responses and seamlessly escalate to human agents when necessary. The solution must also monitor and analyze customer satisfaction levels by measuring key performance indicators such as resolution time, tone and sentiment analysis (e.g., frustration levels), and escalation rates. Based on this data, the system should provide actionable recommendations to continuously improve customer experience. 2. Performance Dashboard The platform must include real-time dashboards that present performance across core metrics and quantify the time savings generated for both customers and EDC staff. <i>Following project closure and appropriate training, the solution should empower EDC's Customer Happiness team to independently enhance and fine-tune the AI agents over time without requiring professional services from the AI platform provider.</i>		
1.2	AI Use Case: Finance AI An advanced AI-powered system designed to transform the Finance function through		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	intelligent automation and autonomous agents. The platform should execute complex tasks across reporting, analysis, and core finance operations—beyond simple query responses—while integrating with EDC’s internal systems and external data sources. The solution should provide strategic insights, operational efficiency, and full traceability. Key use cases, prioritized based on immediate business relevance, include: 1. Financial Reporting AI agents should generate accurate, compliant, and timely financial reports for internal and external stakeholders. Reports must be dynamic, interactive, and drillable, supported by audit trails, and accessible via natural language queries (voice or text). Users should be able to quickly extract and explore financial insights to support decision-making. 2. Interactive Dashboards and Insights The solution should include real-time, interactive dashboards showing key financial metrics, trends, and anomalies across the organization. Users should be able to interact with dashboards through voice or chat interfaces. Dashboards must also highlight automation-driven time savings, provide drill-down capabilities into specific processes (e.g., AP, payroll), and recommend actions where necessary. 3. Expense Tracking and Strategic Forecasting AI agents must accurately track and categorize expenses and analyze spending patterns. The system should allow the CFO to review booking		
--	--	--	--

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	data (historical and future) to forecast performance against budget. Based on this, AI should recommend resource reallocation and highlight risks. Dashboards should incorporate a RAG (Red-Amber-Green) status system to flag financial risk areas proactively. 4. Budget Management The platform should support the creation and real-time management of departmental and company-wide budgets. AI should monitor budget adherence, detect overspending or under-utilization, and propose rebalancing strategies to align with financial goals. 5. Cash Flow and Financial Health Monitoring AI agents should continuously assess liquidity, monitor receivables and payables, simulate business scenarios, and highlight potential risks to financial stability. Predictive analytics should support forward-looking cash flow planning and offer mitigation recommendations. 6. Audit Inquiry Chatbot A specialized AI agent should answer audit-related queries, retrieve relevant documentation, and summarize audit findings. The chatbot must be trained on audit protocols, ensure confidentiality, and provide traceable interaction logs. 7. Payroll Automation End-to-end automation of the payroll cycle, including timesheet ingestion, policy validation, payroll calculation, payslip generation, deduction management, and payout initiation. The system should also flag anomalies and		
--	---	--	--

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	manage exceptions without manual intervention. 8. Accounts Payable and Receivable Management AI agents should handle the full AP/AR cycle: identifying due invoices, validating against supplier SOAs, ensuring reconciliation with procurement data, tracking receivables, sending reminders, and escalating overdue accounts. 9. Accounting Automation AI should ingest data from various financial documents (e.g., payroll, journals) and book them into the accounting system in line with predefined rules. The system should validate entries and ensure compliance with internal financial controls and reporting standards. <i>Following project closure and appropriate training, the solution should empower EDC's Finance team to independently enhance and fine-tune the AI agents over time without requiring professional services from the AI platform provider.</i>		
1.3	AI Use Case: Procurement AI An AI-powered system integrated with the Procure360 platform, designed to enhance the full procurement lifecycle by embedding intelligent agents that operate based on predefined workflows and trigger actions defined by the Procurement team. These AI agents should help streamline processes, ensure compliance, and improve decision-making through data-driven analysis and workflow automation.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	1. RFP Generation Support AI agents should assist in the drafting of RFPs by drawing from historical procurement data, internal templates, technical requirements, and predefined evaluation frameworks. Based on trigger points from the Procurement team (e.g., a need request submission), the AI agent should populate key sections such as scope of work, evaluation criteria, and terms, then initiate the internal review process via Procure360. 2. Technical Proposal Evaluation Once supplier submissions are received through Procure360, AI agents should extract and structure relevant technical information and evaluate responses against the specified requirements. The system should highlight non-compliance, flag inconsistencies, and generate structured comparison summaries to assist the Procurement team in shortlisting proposals. 3. Commercial Scoring & Comparative Analysis AI agents should support the commercial evaluation process by standardizing pricing across proposals, applying pre-set scoring models, and running comparative analyses based on total cost of ownership, delivery terms, and other relevant metrics. These actions should be performed according to scoring logic and business rules configured by the Procurement team. 4. Supplier Risk & Performance Assessment AI agents should draw on internal performance data and external sources to assess supplier risk factors such as delivery delays, contractual		
--	--	--	--

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE		FM.CS.PRC.05	
			Issue No: 01	Revision No: 00

	breaches, and reputational concerns. These risk profiles should be factored into evaluation dashboards, helping the Procurement team make more informed decisions. 5. Procurement Dashboards The system should include real-time dashboards within Procure360 that track cycle times, RFP volumes, supplier performance, risk exposure, and cost savings achieved through automation. Dashboards should allow users to filter by supplier, category, or procurement stage and provide clear, actionable insights. 6. Contract Intelligence Post-award, AI agents should analyze signed contracts to extract and monitor key obligations such as SLAs, delivery milestones, and payment terms. These agents should trigger alerts and notifications based on deviations from expected performance or timelines, supporting proactive contract management. <i>Following project closure and appropriate training, the solution should empower EDC's Procurement team to independently enhance and fine-tune the AI agents over time without requiring professional services from the AI platform provider.</i>		
1.4	Unified AI Platform To ensure scalability all AI agents and capabilities—whether related to Procurement, Finance, Customer Happiness, or other functions—must operate under a single, unified AI platform. This platform should allow AI agents to interact seamlessly with one another across departmental boundaries (e.g., a Procurement agent triggering a finance		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	approval or validating budget allocations), while ensuring that: Agent-to-agent communication and orchestration is supported under a shared protocol or workflow engine, enabling compound automation scenarios across business units. Vendor proposals must clearly describe: 1. Platform Architecture • Whether the solution is based on a single orchestration layer or integrated tools • How the system supports multi-agent workflows and inter-agent communication • How agents are configured, monitored, and maintained within this environment 2. Managed Services Scope • Level of vendor support offered for ongoing platform maintenance, agent training, and performance optimization • Availability of local or regional support teams for critical issues • Any training or onboarding services provided to EDC teams to support self-service configuration 3. Security and Data Management • Data encryption standards (at rest and in transit) • Role-based access controls and identity management integration • Data residency options and compliance with UAE data protection laws		
--	--	--	--

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	- Measures to prevent model drift, data poisoning, and prompt injection attacks (for generative components) 4. Scalability and Extensibility - Ability to onboard additional use cases or departments without re-architecting the platform - Support for integration with existing systems (e.g., Procure360, ERP, CRM) - Availability of APIs, SDKs, or low-code tools for rapid customization		
2	Section 2: Outcomes		
2.1	Customer Service Virtual Omnichannel Assistant Outcomes The deployment of the Customer Happiness AI solution is expected to deliver the following outcomes: End-to-end automation of customer registration, class scheduling, rescheduling, cancellations, and refunds through intelligent voice- and chat-based agents. Creation of complete customer profiles in EDC's systems through conversational interactions. Seamless omnichannel experience across WhatsApp, email, calls, kiosks, and web portals, with AI agents accessible on all platforms. Proactive management of customer feedback, including complaints and suggestions, with automated routing and resolution support. Real-time monitoring of customer satisfaction, based on sentiment		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	analysis, resolution time, and human intervention rates. • Actionable dashboards showing performance across key service metrics and quantifying man-hours saved for both customers and EDC staff. • Configurable AI agents that EDC teams can enhance over time without requiring third-party professional services.		
2.2	Finance - AI Dashboard Outcomes The Finance AI solution is expected to result in: • Automated financial reporting using voice- or text-based queries, providing real-time, drillable, and audit-traceable financial insights. • Interactive dashboards displaying financial performance, anomalies, and efficiency gains across functions like payroll, AP/AR, and budgeting. • Predictive forecasting tools that allow CFOs to simulate outcomes, identify financial risks, and optimize resource allocation. • Integrated budget management, tracking actuals vs. plan and issuing early warnings on budget deviations. • Cash flow and liquidity analysis, with AI-generated recommendations to maintain financial stability and reduce risk exposure. • Expense categorization and trend tracking, supporting CFO decision-making with granular booking data. • Risk-based RAG dashboard indicators, highlighting areas of concern before they materialize into financial issues. • Automated audit query handling, reducing time and effort in responding to auditor requests.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

2.3	Procurement AI The implementation of Procurement AI should achieve: • AI-assisted RFP drafting, reducing manual effort and improving consistency, accuracy, and compliance with procurement policy. • Structured technical evaluation of supplier proposals, identifying compliance gaps and summarizing alignment with RFP requirements. • Automated commercial scoring, normalizing inputs, applying weighted scoring, and presenting optimal award scenarios. • Vendor risk assessment, integrating past performance and external data sources to inform decision-making. • Real-time dashboards within Procure360, showing cycle times, supplier performance, cost savings, and compliance insights. • Obligation tracking from contracts, with alerts for non-compliance or missed milestones. • Configurable workflows and evaluation logic, empowering Procurement users to adjust scoring models and automation triggers without vendor dependency.		
2.4	Unified AI Platform & Digital Workforce Governance The chosen solution must enable: • Deployment of all AI agents within a single unified platform, ensuring seamless communication across departments and processes. • Cross-functional agent collaboration, enabling compound workflows across		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	Customer Happiness, Finance, Procurement, and future departments. • Centralized governance and monitoring of the digital workforce, with audit logs, performance tracking, and control over agent behaviour. • Role-based access controls, ensuring data security and compliance with internal policies and regulatory requirements. • Managed services support, with clear SLAs for maintenance, incident response, and performance optimization. • Data governance, including encryption, data residency compliance, secure access, and resilience against AI-specific threats. • Scalability and extensibility, allowing new use cases to be onboarded quickly without re-architecting the platform. • Empowerment of EDC teams to configure and evolve AI agents independently, with minimal reliance on the vendor post-implementation.		
2.5	Measurable Outcomes: To support EDC's strategic focus on value creation, vendors must complement each use case outcome with an estimated financial impact, derived from predicted interaction or transaction volumes. In addition to operational efficiencies (e.g., time savings), dashboards must clearly show measurable ROI, including: • Cost savings per use case. • Financial value of automation (e.g., man-hour reduction converted into AED). • Predicted vs. actual usage volumes over time.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	Key assumptions used to model ROI (e.g., average interactions per customer, cost per manual transaction, etc.). These metrics will be used to track benefits realisation and inform future scaling decisions.		
3	Section 3 – Success Criteria		
3.1	Customer Service Virtual Omnichannel Assistant & Call Center Inquiries The success of the Customer Happiness AI deployment will be measured by a combination of accuracy, speed, user experience, and system performance: ≥ 90% accurate AI-generated responses across all channels ≥ 95% of bookings processed without human intervention - Avg response time ≤ 5–7 seconds across all interaction channels - Latency for AI responses ≤ 3 seconds - Escalation rate to human agents < 10% ≥ 80% First Call Resolution (FCR) for AI-handled queries ≥ 80% CSAT (Customer Satisfaction) for AI-handled interactions ≥ 90% customer profile completeness created through AI interactions - Sentiment-based escalation accuracy ≥ 85% ≥ 75% of complaints and suggestions tagged and routed without delay ≥ 90% customer satisfaction with booking and scheduling experience - Dashboard accuracy on performance KPIs ≥ 95%		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	Agent performance improvement loop triggered for $\geq 90\%$ of escalated queries		
3.2	Finance – AI Dashboards & Automation Success in the Finance AI deployment will be assessed through improvements in decision speed, process efficiency, and forecasting accuracy: - Query response time ≤ 2 seconds $\geq 99.5\%$ platform uptime $\geq 90\%$ coverage of predefined financial query types $\geq 50\%$ reduction in report generation time compared to manual methods $< 5\%$ false positive rate in exception handling $\geq 90\%$ forecasting accuracy (variance vs actuals) $\geq 60\%$ automation of recurring financial processes (e.g., payroll, AP/AR) $\geq 80\%$ user satisfaction with dashboard usability - Time-to-insight reduced by $\geq 50\%$ for key decisions $\geq 75\%$ of major budget allocation decisions made with AI-generated recommendations - Dashboards actively used by ≥ 3 business units within 6 months		
3.3	Procurement – Drafting, Evaluation & Analysis The Procurement AI system will be evaluated based on drafting accuracy, time savings, evaluation integrity, and system usability: $\geq 85\%$ completeness in first RFP draft generated by AI $\geq 50\%$ reduction in RFP cycle time		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	• < 20% human revision required after initial draft • ≥ 90% accuracy in requirement matching and compliance checks • ≥ 40% reduction in supplier evaluation time • ≥ 95% score match between AI and expert evaluations • 100% explanation traceability of all AI-generated scores • Bias rate < 5% in evaluation outputs • ≥ 80% of users report ease of configuring scoring/evaluation criteria • ≥ 70% of sourcing cycles initiated via pre-configured workflow triggers • ≥ 90% of contracts reviewed and key obligations extracted by AI • Supplier participation time reduced by ≥ 30% • ≥ 90% of procurement decisions supported by explainable AI output • Continuous improvement triggered in ≥ 50% of sourcing cycles		
3.4	Unified AI Platform & Digital Workforce Governance Success for the Unified AI Platform will be defined by platform performance, security, governance capability, and cross-functional enablement: • 100% of AI agents deployed through a single orchestrated platform • ≥ 95% overall AI platform uptime • ≥ 90% of agent actions logged and accessible via central governance layer • < 2 hours MTTR (Mean Time to Recovery) for platform failures • ≥ 80% of cross-departmental workflows executed through agent collaboration • ≥ 90% of new use cases configured without vendor professional services		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	- Zero critical security incidents related to AI access or data handling ≥ 95% compliance with internal data access and usage policies - Role-based access control fully implemented across all agents and data layers - Governance and performance dashboards adopted by ≥ 3 executive stakeholders		
4	Section 4: Deliverables		
4.1	- Requirements from Appendices C, D, G, and H must be fully addressed in the proposal. - The proposed system must be secure, easily deployable, and integrated with EDC environments.		
5	AI Compliance and Ethical Standards		
5.1	Provide a documented bias mitigation strategy aligned with ISO/IEC 24027, including fairness and non-discrimination metrics across relevant population subgroups.		
5.2	Provide documentation on AI explainability and transparency, detailing interpretability tools (e.g., SHAP, LIME) and model behavior across a representative range of inputs and outputs. Include user-facing explanation mechanisms for different stakeholder roles.		
5.3	Submit an AI Security Plan addressing protections against model inversion, adversarial inputs, membership inference, and data leakage, in accordance with AI-specific threat models.		
5.4	The supplier/vendor is strictly prohibited from using any data—whether structured or unstructured—provided by Emirates Driving Company (EDC) during the project for any purpose other than the execution and delivery of the AI @ EDC project. This includes training, fine-tuning, benchmarking, or enhancing any third-party or		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No:	Revision No:
		01	00

	proprietary AI models. EDC data must not be used for training, retraining, or any machine learning purposes outside the scope of this engagement. All AI components delivered must be trained solely on data explicitly approved or provided for the project by EDC. The vendor shall ensure data privacy, integrity, and exclusivity at all stages and must certify that no part of the data will be retained, reused, or repurposed beyond the agreed contractual scope		
5.5	Describe your data privacy and anonymization protocols used during training and inference. Demonstrate compliance with UAE Data Protection Law, and any other applicable laws and frameworks.		
5.6	Provide a Model Card for each AI component, including intended use, training data origin and licensing, architecture, performance metrics, and known limitations. Refer to the Sample Model card: Appendix D.		
5.7	Define a human-in-the-loop oversight mechanism, including override capabilities, manual review procedures, and escalation processes for any automated decision-making components.		
5.8	Provide a documented AI lifecycle and version control process, including retraining triggers, dataset updates, model deployment stages, rollback procedures, and change tracking.		
5.9	Submit a performance monitoring plan for detecting drift, tracking fairness and error rates, and incorporating user feedback.		
5.10	Provide an AI-specific training plan for EDC staff, including roles, responsibilities, and interaction with the AI system.		
5.11	Submit a post-deployment risk management framework covering unintended outcomes, risk mitigation strategies, and documentation.		
5.12	Confirm and document compliance with UAE Data Protection Law, GDPR, and relevant ISO/IEC standards, including ISO/IEC 27001 (Information Security), ISO/IEC 23894 (AI Risk Management), and ISO/IEC 42001 (AI Management System).		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

5.13	Submit any third-party or independent audit reports related to AI ethics, fairness, model robustness, security, or legal compliance post-implementation.		
5.14	Provide documentation from an Ethical Review Board or Committee, including any assessments or recommendations made.		
5.15	Submit data provenance and lineage documentation detailing the origin, handling, transformation, and validation of data used in training and inference.		
5.16	Describe the user redressal mechanism for individuals impacted by AI decisions, including feedback and resolution procedures.		
5.17	Provide a responsible decommissioning and retirement plan for AI systems, covering data deletion, model archiving, and risk mitigation for discontinued services.		
5.18	Demonstrate alignment with ISO/IEC 42001:2023 (AI Management System). Include internal governance structures, accountability roles, and the processes used to manage AI risks.		
5.19	Submit an AI Impact Assessment (AIIA) or equivalent, outlining potential risks to privacy, human rights, societal well-being, and operational fairness, along with mitigation strategies.		
5.20	Describe the vendor's AI governance and accountability framework, including the designation of responsible AI officers, audit trails, and oversight functions such as review boards or compliance checkpoints.		
5.21	Submit an Operational Resilience Plan for AI services detailing failover strategies, safe fallback modes, error handling, and service continuity for critical functions.		
5.22	Confirm data localization and sovereignty compliance. All data (training, inference, logs, and model artifacts) must remain within the UAE infrastructure and be processed in accordance with national data residency requirements.		
5.23	Central governance and oversight of the digital workforce are maintained by EDC's Digital, Data, & Technology functions, including full		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	visibility into agent behavior, audit trails, performance, and decision rationales.		
6	Support, SLA & Training		
6.1	Required SLA: EDC requires the following SLA; no other option should be included as it will not be considered (for example, lower-level SLA is not accepted compared to what is stated below). - Support must be available for all for connectivity of business-critical applications 24/7, especially customer facing AI. - Critical Outage (Customer-Facing AI Tools): 15 minutes for response, 30 minutes for assessment, and 120 minutes for resolution. - Non-Critical Outage (Enterprise AI Tools): 30-minute response time, 120 minutes to assess, and 8-hour resolution time. The hours of operation must be aligned with EDC hours except for Customer Facing AI, which should be available 24/7. Saturday – Thursday: 6 am – 11 pm		
6.2	Please share the Escalation Matrix and Support Model		
6.3	Do you have any service portal where you provide online access to end-users to raise incident/service requests?		
6.4	List training & certification available for your product - AI system functionality - Operational limitations - Monitoring and ethical usage		
6.5	Easy deployment between multiple environments to support EDC's software development lifecycle.		
6.6	Complete Training & Reference Materials must be submitted as per the milestones defined.		
6.7	The EDC IT team must be comprehensively trained to manage, configure, and secure the AI platform, including overseeing system integrations, data		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	pipelines, and agent behavior in line with internal governance and UAE data protection regulations. End users must also receive focused training on the importance of the data they input into AI systems—ensuring accuracy, compliance, and confidentiality—while being made aware of potential risks related to data misuse. Additionally, training should cover AI infrastructure security fundamentals, including recognizing and preventing threats such as prompt injection and data poisoning, thereby fostering a secure, accountable AI environment across the organization.		
7	Deployment (Application and Infrastructure Platform)		
7.1	Deployment Recommendation The vendor is required to assess and provide a detailed recommendation for the most suitable deployment approach for the proposed solution based on the following two options: Option 1: UAE-Based public/private Cloud Environment. The vendor must outline the advantages, disadvantages, and any limitations associated with deploying the solution on a UAE-based cloud infrastructure. This should include considerations such as data residency, scalability, cost, security compliance, and operational efficiency. EDC IT will only provide any subscription information that we hold as applicable; all costs should be included as part of the project in the Commercial Offer. Option 2: On-Premises Infrastructure The vendor must outline the advantages, disadvantages, and any limitations associated with deploying the solution in an on-premises environment. This should cover aspects such as hardware requirements, maintenance responsibilities, data control, security, and total cost of ownership.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

7.2	On-premises system (If Applicable) (Please refer to point 7.3 for details): EDC will create an empty VM once the vendor provides their specification. Only licensed Windows OS will be deployed on request, and any other OS deployment is the partner's responsibility. The partner is responsible for installing and Hardening the OS and installing any software/database required to run the application. The partner must patch and update the server OS and application using their own engineer on a quarterly basis prior to going live. Any Zero-Day vulnerabilities must be patched or mitigated within 24 hours of discovery. This is mandatory. (partial compliance is not accepted and will result in a "0" rating).		
7.3	Infrastructure Requirement Specification Vendors are required to submit a comprehensive infrastructure requirement specification for both cloud-based and on-premises environments and propose the cost in commercials of all the components used in this engagement. This must include, but is not limited to, the following components: • Compute Requirements: vCPU, RAM, GPU (if applicable), and any hardware acceleration needs (e.g., TPU, FPGA) specifically for AI/ML workloads. • Storage Requirements: Storage type (SSD/HDD), total size, IOPS (Input/Output Operations Per Second) expectations, and data retention policies. • Network Requirements: Bandwidth needs, acceptable latency thresholds, required ports and protocols, firewall rules, and internet connectivity considerations. • Operating System & Software Stack: OS version, middleware components,		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	databases, AI frameworks (e.g., TensorFlow, PyTorch), and all required licensing or runtime environments. • Security Requirements: Encryption standards (in transit and at rest), access controls, patching schedules, vulnerability management processes, and compliance with UAE regulatory frameworks (e.g., NESAs). • Virtualization/Cloud Preferences: Compatibility with EDC's virtual machine environment (if applicable) or preferred UAE cloud providers (e.g., Azure UAE, AWS UAE, G42), including supported VM instance types for AI/ML workloads. • Cloud Subscription Model: Expected cloud service models (e.g., IaaS, PaaS, SaaS), pricing structure (e.g., pay-as-you-go, reserved instances), license portability, and estimated monthly cost breakdown for AI-related resources. • AI/ML Workload Specification: Vendors must provide detailed specifications for AI/ML workloads, including both training and inference environments, and must explicitly include the following: • GPU Requirements per Use Case: ○ Type and configuration (e.g., NVIDIA A100, L40S, etc.) ○ Number of GPU instances required ○ Expected peak and average utilization per use case (e.g., queries per second, concurrent sessions) • Predicted Query Volume & Inference Load: ○ Forecasted number of daily/weekly/monthly interactions or queries per use case (e.g., number of customer		
--	---	--	--

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	queries, dashboard requests, etc.) - Estimated GPU inference time per query (in milliseconds or seconds) - Batch vs real-time inference mode (if applicable) Running Cost Estimates: - Monthly and annual operating cost projections for GPU-based workloads, broken down by: - Compute cost (GPU VM instances) - Storage and IOPS for AI workloads - Data ingress/egress (if cloud-hosted) - AI service licensing (if applicable, e.g., Azure OpenAI, Google Vertex AI) Cost Model Assumptions: - Clearly state unit costs (e.g., GPU/hour, storage/GB, etc.) - State cloud provider and region-specific pricing assumptions - Include cost sensitivity based on $\pm 20\%$ volume fluctuations Environmental Dependencies: Integration requirements with existing systems such as CRM, ERP, or data lakes. This should include data ingestion methods, APIs, and access roles.		
7.4	All future system releases should be included as part of the maintenance agreement after project delivery. Please quote 1 year as standard & mandatory and a 3-year optional one (unpriced BoQ in the Technical Proposal and same line items separately in the commercial proposal)		
7.5	The system should have fail-over and roll-back mechanisms.		
7.6	The system should operate on a 24/7 basis, 365 days a year.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

7.7	Any single-point failure in the system should not have an impact on the availability and performance of the overall system.		
7.8	State all security measures that will be provided to ensure all risks are mitigated in case of cloud application provision. Details should be mentioned in your technical proposal. For example, what will your mitigation or protective service be against DDOS or brute force attacks?		
7.9	The system should have a provision for importing bulk data in Excel or any other form. Please state all available ways.		
7.10	The System should have a provision for users to develop and enhance integrated Dashboards as well as power BI dashboard, their defined criteria.		
7.11	The vendor should make sure that data migration and data conversion have been completed successfully before Go-Live.		
8	General		
8.1	Vendor/Partner/Bidder to understand EDC's Requirements and develop and maintain a Project Charter & Project Initiation Document (PID) that shall be agreed upon with EDC		
8.2	Mandatory Site Visits: It is a mandatory requirement for the bidders to visit EDC site(s) to collect all requirements. A MOM by the bidder must be sent to EDC after performing the site visit with all details stated and any agreements. Technical Proposals must include MOM from Site Visits. Proposal without this will be rejected without review.		
8.3	ROI/TCO (3 - 5 Year Period) is to be stated in commercials according to your bid. In addition, the vendor must provide a quantitative model estimating ROI for each proposed AI use case, grounded in predicted transaction volumes or user interactions per use case. This model must include: Estimated time or cost savings per transaction.		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No:	Revision No:
		01	00

	- Forecasted monthly/annual interaction volumes. - Total value realized per year. - Assumptions used (e.g., current manual processing time, costs, customer traffic, etc.)		
8.4	Unpriced BOQ with part / SKU numbers must be provided with your technical proposal with the same structure and line items as stated in the separate commercial proposal. Optional items in the BoQ must be clearly marked "Optional – Not included in this implementation."		
8.5	Please list the effort required (Time to Deliver Project) in Man days or Calendar days (Sequential or Parallel). EDC's target project delivery time is within 44 Working Days (60 calendar days) of receiving the LOI.		
8.6	Project Management Plan to be submitted with the tender document as a soft copy		
8.7	Project Plan with resource allocation details. (Time from EDC Team) to be submitted with the tender document separately as a soft copy		
8.8	EDC will require 5 working days to confirm any development and UAT. Please build this into your project plan and timeline.		
8.9	The Project Manager must visit EDC Premises at least once a week to deliver project updates, identify any risks, and ensure mitigation plans are in place. A risk register must be maintained and updated by the partner project manager.		
8.10	EDC's Project Management tool must be used by the supplier's project manager to manage all aspects of the project including all milestones and tasks (for EDC Team & partner team). This will be used to send milestone completion reports to procurement.		
8.11	Business Analysts, Solution Architects, Respective Consultants including the Functional Consultant will be required to work onsite at EDC for the duration of the project. This includes collecting business requirements both before and after implementation, supporting testing activities, and		

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05 Issue No: 01 Revision No: 00	
---	------------------------------------	--	--

	validating use cases in collaboration with the EDC Relevant team members. This onsite presence is essential to ensure successful delivery and is non-negotiable.		
8.12	Full Project Management is the responsibility of the selected partner, including coordination with individual EDC Team members.		
8.13	Full Project / Platform / Software Documentation must be provided and saved in our SharePoint, including the Project Completion Report as per milestone or end of the project, prior to full payment. Project Documents to be provided & Maintained by Partner: 1. Project plan 2. Project charter 3. Quality management plan 4. Weekly status reports: ▪ All Progress meetings will be followed with a Minutes of meeting report submitted by the partner to EDC via email for signature by all participating parties. ▪ Progress Meetings will be conducted once a week. 5. Communication Plan 6. Stakeholder register 7. Risk Register 8. Project checklist 9. Deliverable documentation 10. Project closure report All documentation needs to be saved in the shared SharePoint by the partner.		
8.14	Soft copies of technical documents/proposals either via email or USB to the procurement department		
8.15	Have you carefully reviewed this "Scope of Work," checked for inaccuracies, and submitted a final version? Please input "Agreed" as a response.		
8.16	Please fill out the vendor security checklist entirely and accurately. Not doing so will lead to proposal dismissal.		

COMPLIANCE SHEET/ ACCEPTANCE CRITERIA:

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE		FM.CS.PRC.05	
			Issue No: 01	Revision No: 00

The bidder must provide supporting documentation along with a compliance sheet, incomplete detail or missing documents will impact the technical evaluation scoring & may lead to the rejection of the bidder.

Bill of Quantity (Please provide details below and provide pricing in the commercial envelope in the same format/serial. DO NOT put commercials below)

S/N	SKU or Part #	Description	Quantity	Remarks
1				
2				
3				

**** Please add additional lines as required to the table above for your complete BoQ." All BoQ must be validated.****

PERIOD OF PERFORMANCE:

Project must be delivered within <specify number of working & calendar days>

PLACE OF PERFORMANCE:

Emirates Driving Company, all entities/branches

- *Project Requirements Gathering:* On-Site at EDC Premises
- *Project Planning and System Modeling:* On-Site at EDC Premises
- *System Implementation:* Hybrid (TBC)
- *System Deployment:* Hybrid (TBC)
- *All Training Activities:* On-Site at EDC Premises

EXPECTED OUTCOMES:

As per the scope of work.

PAYMENT TERMS & INVOICING:

Milestone-based

- There will be no advance payments until the project is kicked off. However, if an advance is required, the implementation of the project must continue while payments are being processed.
- Phase 1: Analysis
- Phase 2: Development and Implementation
- Phase 3: Deployment, Testing and Training

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

- Phase 4: Go Live and Production
- Phase 5: Maintenance & Support – Based on the supplier's yearly maintenance cost

15% Max advance or as per EDC Procurement Policy if required but dependent on the condition stated above.

Milestone completion reports will be extracted from EDC's Project Management tool and will be used to support any release of payments.

PROJECT MANAGEMENT:

Full Project Management by Partner managing both partner and EDC Teams according to EDC's PMO Guidelines and PMI Standards.

The partner must use EDC's project management tool to manage the entire project, assign tasks to all project members (Partner and EDC Team), follow up, and provide weekly updates.

The partner must demonstrate their capability of project management by explaining the methodology to be followed for project management and the development of all required project management documentation covering but not limited to:

- The supplier is responsible for managing the entire project, including coordination with EDC team members who are part of this project.
- The supplier shall follow an internationally recognized Project Process Standard. Please state the standard followed by the supplier in the technical proposal.
- The supplier shall include appropriately qualified, certified, and experienced project management staff to manage this project.
- The supplier shall deliver regular project progress reports (once weekly at a minimum) and attend regular progress reporting and project management meetings, which shall be agreed upon with EDC
- The supplier shall prepare and maintain a project time plan that shall be agreed with EDC. This shall be maintained on EDC's online project management tool with an initial MPP and an excel version sent to EDC in order to be uploaded to EDC's platform.
- The supplier shall prepare and maintain a Project Charter & Project Initiation Document (PID) that shall be agreed with EDC
- The supplier shall prepare and maintain a System Functional & Design specification that shall be agreed with EDC
- The supplier shall prepare and maintain a separate System Information Security specification that shall address all technical aspects, policies, and processes of Information security for the system.
- The supplier shall prepare a high-level presentation for the System describing its use, design, architecture, delivery plan, etc., suitable for presentation to executive management, which shall be agreed upon with EDC
- The supplier shall prepare and maintain a detailed system test plan that shall be agreed with EDC
- The supplier shall prepare and maintain a risk register for the system.
- The supplier shall maintain traceability of requirements from the origin (this compliance document) through design and final acceptance test plans, such that each compliant point shall be demonstrated during final acceptance.
- The supplier shall prepare and maintain a detailed System acceptance specification that shall be agreed with EDC and shall be used as a checklist to finalize acceptance of the system

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

- The supplier shall maintain a project document repository, within which ALL project documents will be archived. This shall be accessible by EDC and shall be delivered as part of the final acceptance, as agreed with EDC.
- All items, reports, timelines, documents, presentations etc. specified within the Project Process Compliance shall be prepared using standard office applications and shall be delivered in hard and soft copy in both Arabic and English languages unless otherwise agreed with EDC.

Support and SLA:

1-year minimum after project delivery with an optional quote for up to 3 years in commercial proposal

Acceptance

Appendix A: Supplier Expectation and Assumption Statement(s)

Expectation	Assumption
Supplier to state in the EXPECTATION / ASSUMPTION column any ASSUMPTIONS that they have made about EDC as part of this project/system that could in any way impact the delivery of this project/system Bidder to describe in this column.	Supplier to state any assumptions they have made about EDC in this column – EDC will respond with accepted/declined.
EXPECTATION 1	Assumption 1
EXPECTATION 2	Assumption 2
EXPECTATION 3	Assumption 3
EXPECTATION 4	Assumption 4
EXPECTATION 5	Assumption 5

			Issue No: 01 Revision No: 00

EXPECTATION 6	Assumption 6
EXPECTATION 7	Assumption 7

Appendix B: Product Evaluation

PRODUCT EVALUATION QUESTIONS		
	Questions	Answers
1	Original Product(s) & Company Profile This section is used to evaluate any products proposed and the original manufacturer or supplier of those products. Please complete one sheet for EACH MAJOR PRODUCT RELEVANT TO THE PROJECT. There is no need to include this for "common off-the-shelf" (COTS) products. Please contact EDC for clarification if required.	
1.1	Name of product	
1.2	Brief about the product	
1.3	Version of Product_name proposed?	
1.4	What date was Product_name V1.0 released?	Dd/mm/yyyy
1.5	Name of Company producing Product_name	Company_name
1.6	If Company_name is a member of a group of companies, please state the name of the group of companies.	Group_name
1.7	In which country is Company_name registered	Country_name
1.8	Is Product_name required for any pre-registration in UAE?	
1.9	Product Development & Maintenance	
1.10	State who is responsible for the continuing development of Product_name and how they intend to do this.	

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE		FM.CS.PRC.05	
			Issue No: 01	Revision No: 00

1.11	Detail the number of years of continued support and development that will be guaranteed for this product.	
------	---	--

Appendix C: AI Component Disclosure Table (Mandatory)

Component Name	AI Technique Used	Training Data Source	Intended Use	Limitations	Human Oversight Level	Monitoring Approach

Appendix D: Sample AI Model Card Template (Mandatory)

Section	Subsection	Description / Notes
Model Overview	Purpose	Describe the intended use and business context
	Type	Classification, NLP, computer vision, etc.
	Architecture	e.g., CNN, Transformer, Random Forest
Intended Use	Applicable Scenarios	Where the model is appropriate to use
	Not Recommended Scenarios	Where the model should not be used
Training Details	Data Sources	Origin, diversity, geographic representation
	Labeling Method	Manual, automated, hybrid
	Preprocessing Steps	Normalization, filtering, augmentation
Performance Metrics	Metrics	Accuracy, F1 Score, Precision, Recall
	Subpopulation Testing	e.g., age, gender, region
	Known Limitations	Weaknesses or failure modes of the model
Ethical Considerations	Bias Mitigation	Measures taken to reduce bias

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE		FM.CS.PRC.05	
			Issue No: 01	Revision No: 00

Security Considerations	Privacy Compliance	GDPR, UAE law, or other relevant regulations
	Fairness Evaluations	Tests or reviews conducted for fairness
	Adversarial Defense	Strategies to prevent manipulation
	Inversion Risk	Safeguards against leaking training data
Lifecycle Management	Version ID	e.g., v1.2.3
	Last Retraining Date	Most recent training or fine-tuning date
	Monitoring Triggers	Events that trigger model review/update
Explainability	Tools Used	SHAP, LIME, etc.
	User Access	What EDC users can see (dashboards, logs)
Human Oversight	Responsible Roles	Who can override or audit model decisions
	Escalation Path	How alerts or issues are handled
Deployment Details	Deployment Environment	Cloud/on-premise, hardware specs, latency constraints
	Integration Interfaces	APIs, SDKs, formats for inputs/outputs
	Resource Consumption	CPU/GPU usage, memory footprint - Include average GPU inference time per query and estimated peak vs average load requirements for production use.
	Deployment Date	First production release date
User Impact and Accessibility	End-User Type	Internal staff, customers, and public users
	Accessibility Considerations	Multilingual support, usability for people with disabilities
	User Instructions	Documentation provided to end users for correct use.
Audit & Logging	Audit Logs	Is decision data logged for traceability?
	Retention Period	How long logs are stored
	Tamper Protection	Are logs immutable or protected from alteration?
Regulatory Alignment	Regulatory Standards	ISO/IEC 23894, EU AI Act, UAE AI Ethics Guidelines
	Third-Party Audits	External evaluations or certifications obtained
	Risk Classification	High-risk, medium-risk, or low-risk per relevant law
Feedback & Continuous Learning	Feedback Loops	Can user feedback improve the model?
	Feedback Collection Method	Manual, automatic, in-app, etc.
	Update Frequency	How often the model is reviewed or retrained
Data Lineage	Dataset Versioning	Tracking versions of training datasets
	Data Collection Date	When and where data was collected

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

	Consent & Provenance	Proof of consent, the lawful basis for data use
--	----------------------	---

Appendix E:**An End User Risk Awareness & Data Declaration**

S#	Risk Awareness Question	Response (☐ Yes / ☐ No), Details (To be completed by Vendor)
1	Will this system make automated decisions that impact people?	
2	Will the system use sensitive or personal data?	
3	Could this system produce unfair or biased outcomes?	
4	Is human override possible and planned?	
5	Are there known regulatory or ethical risks associated with the system's operations?	
6	Will decisions made by this system affect legal rights, employment, or access to services?	
7	Has an AI ethics review or impact assessment been conducted (internally or externally)?	
8	Can users appeal or contest decisions made by the AI system?	

B. Data Readiness Declaration

S#	Data Declaration Question	
1	Source(s) of data (e.g., LMS, CRM, third-party sources):	
5	Any limitations or restrictions on data usage?	
6	Are data minimization principles applied (i.e., only necessary data is collected/used)?	

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

7	Is the data stored, transmitted, and processed securely (e.g., encrypted, access-controlled)?	
8	Will data be shared with any third parties? If yes, specify.	

Appendix F:

Operational Feedback & Monitoring Plan

S#	Requirement Area	Description	Response/Details (To be completed by Vendor)
1	Monitoring Responsibilities	Identify who at the vendor will be responsible for reviewing AI performance, draft reports, and audit logs.	
		Specify the frequency and format of reporting (e.g., dashboard, PDF, portal).	
2	User Feedback Mechanism	Describe how end-user feedback will be collected (e.g., portal, email, UI button).	
		Indicate how feedback is logged, categorized (e.g., usability, errors), and routed.	
		Review by EDC frequency:	Monthly
3	Escalation Path	Outline the process for managing AI errors, misclassifications, or unexpected behaviors.	
		List names/roles responsible for escalation and intervention.	
		Timeframes for action on: • High Severity Issues • Non-critical issues	

 الإمارات لتعليم القيادة Emirates Driving	STATEMENT OF WORK/SCOPE	FM.CS.PRC.05	
		Issue No: 01	Revision No: 00

4	Model Adjustment Plan	Define who is authorized to approve AI model retraining, re-configuration, or suspension.	
		Include criteria for triggering retraining (e.g., performance drop, fairness degradation, user feedback).	
		Describe versioning and documentation protocols for all model changes.	

Appendix H:

Identifying the necessary resources needed to complete the project

Curricula Vitae / Resume shall be submitted for each member of the proposed project team, with full details of their relevant project experience, number of years of experience, and suitability for undertaking this project on behalf of EDC. In case the Supplier requests for replacement of its personnel after awarding the project the alternative staff must be approved by EDC first.

EDC has the right to reject any personnel, nominated or not, at any time during the project by giving written notice, and the Supplier shall, within 5 working days, provide a replacement acceptable to EDC.
