

Potential AI Uses for Ground Service Operations

Developing POC in collaboration with BAS

Enhancing Ground Services with Generative AI – Using Soothsayer’s AuGENT Platform

Passenger & Flight Handling

- Multilingual Virtual Assistants for helping passengers with baggage issues, flight info, and service requests
- Auto-generation of incident reports and lost baggage claims from staff inputs
- Conversational access to SOPs and compliance checklists

Document Intelligence

- Extract, summarize, and validate:
 - Flight manifests, boarding logs, load sheets
 - Baggage reconciliation reports
- OCR + GenAI to digitize and interpret scanned operational forms

Staff Support & Training

- GenAI copilots to answer on-the-job questions (IATA rules, emergency protocols)
- Create interactive training modules and adaptive learning paths from manuals

Communication Automation

- Summarize shift handover logs
- Auto-translate operational updates for multinational teams
- Generate daily briefings and alerts

Traditional AI Use Cases

Motorized Equipment Scheduling & Usage Optimization

- AI-based allocation of motorized GSE (tugs, pushback tractors, belt loaders, GPUs)
 - Based on real-time flight schedules, gate assignments, and turnaround needs
- Dynamic dispatching to reduce GSE idle time and unnecessary trips
- Equipment pooling suggestions to maximize utilization across gates and terminals

Real-Time Monitoring & Decision Support

- AI dashboards showing:
 - **GSE availability & status** (Active / Idle / Under Maintenance)
 - Heatmaps of **equipment demand**
 - Alerts for potential service delays or equipment shortages

Ground Service Turnaround Optimization

- Predict and optimize sequencing of ground services
 - Baggage, catering, refueling, cleaning
- Recommend ideal order of tasks and resource assignment to minimize turnaround delays

Crew & Shift Scheduling

- AI-assisted planning for crew-to-flight assignments based on shift availability, skill, and workload
- Scenario simulation for disrupted schedules or delays

Predictive Maintenance for GSE

- Use IoT & telematics data to detect early signs of wear and tear
- AI models predict maintenance needs before breakdown
 - Reduces unplanned downtime
 - Improves fleet availability during peak hours

Soothsayer's Primary Recommendations for POC

Start with GenAI for Quick Wins, Scale with Ease Across Ground Operations

Why Start with GenAI?

- Ideal for quick wins: passenger forms, incident reports, knowledge access
- Requires less historical data compared to predictive models
- Minimal disruption to existing workflows
- ROI visible within weeks

Why AuGENT Platform?

- Modular architecture: install once, expand fast
- Enables easy onboarding of new use cases across multiple processes & departments:
- Built-in multi-user management, audit logs, and data security
